Installation and operating instructions

General Instructions

Read these instructions carefully before installation and use. Keep this manual for future reference.

The product may only be used as set out in the assembly and operating instructions. The guarantee is only valid if the product is used in the manner intended and in accordance with the instructions.

Application

Thermowarm TWS is a series of robust convectors with smart control designed for industrial and public buildings, such as changing rooms, stores and toilets. TWSC can also be used in corrosive and aggressive environments. TWS200 has a surface temperature as low as 60°C, which makes it ideal for daycare centres and bathrooms. Enclosure class: IP44 (TWSC: IP54).

Mounting

The appliance is supplied with a pre-installed wall bracket for attaching horizontally to the wall using four screws. The top two holes are "keyholes". See the dimensions on the introductory pages. For minimum distance, see diagrams on introductory pages.

Connection

TWS is fitted with a 0.6 metre long cord without plug and is connected to a junction box. The convector is designed for fixed installation.

The installation, which should be preceded by an omnipolar switch with a contact separation of at least 3 mm, should only be wired by a competent electrician and in accordance with the latest edition of IEE wiring regulations. Thermowarm TWS is switched on using a push-button at the rear of the right-hand plastic side. See wiring diagrams.

Replacement of cable

If the cable is damaged the unit must be sent to Frico for replacement. Contact Frico Technical Support.

Start-up

When the unit is used for the first time or after a long period of disuse, smoke or odour may result from dust or dirt that has collected on the element. This is completely normal and disappears after a short time.

Service, repairs and maintenance

For all service, repair and maintenance first carry out the following:

- 1. Disconnect the power supply.
- 2. The appliance can be demounted and opened by four screws at the rear.
- 3. Reinstall.

Maintenance

In all electrical heating appliances, small clicks can occur due to movement when the material expands and contracts with changes in temperature.

As the components are maintenance-free, no maintenance other than cleaning is necessary. The frequency of cleaning can vary depending on local conditions, although it should be at least twice a year. Grilles and elements can be vacuum cleaned or wiped using a damp cloth. Use a brush when vacuuming to prevent damaging sensitive parts.

TWS200: The surface can be washed using a mild soap solution or carpet foam.

Avoid strong solvents such as acetone or similar, as well as alkaline or acidic detergents. The plastic end covers must not be exposed to oily substances.

Overheat protection

The convector is fitted with overheat protection. The overheat protection is reset by pressing the button located under a threaded cover at the side of the heater. See the introduction pages.

Packaging

Packaging materials are chosen with consideration to environment and are therefore recyclable.

Handling of product at end of working life

This product may contain substances necessary for functionality of product but potentially dangerous for the environment. The product should not be disposed mixed with general household waste but delivered to a designated collection point for environmental recycling. Please contact local authority for further details of your nearest designated collection point.

Safety

- For all installations of electrically heated products should a residual current circuit breaker 300 mA for fire protection be used.
- Keep the areas around the air intake and exhaust grilles free from possible obstructions!
- The unit must not be fully or partially covered as overheating can result in a fire risk!
- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.
- Children of less than 3 years should be kept away unless continuously supervised.
- Children aged from 3 years and less than 8 years shall only switch on/off the appliance provided that it has been placed or installed in its intended normal operating position and they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.
- Children aged from 3 years and less than 8 years shall not plug in, regulate and clean the appliance or perform user maintenance.

CAUTION — Some parts of this product can become very hot and cause burns. Particular attention has to be given where children and vulnerable people are present.

Timer

The set point value can be changed for a limited period using the timer (15 minutes to 44 days).

While the timer is running, its symbol flashes and the display alternately shows the remaining time and the set temperature.

When time is up the unit returns to previous settings.

Week program

There are nine preset weekly programmes (P1-P9) and the potential to add an additional four (U1-U4).

The function ITCS (default) makes the control learn when it needs to start in order to reach a certain desired temperature at a specific time in the environment it is used. This function can be deactivated (see Settings menu).

Preset programs
